

New methods in acoustic testing applied to wind tunnels

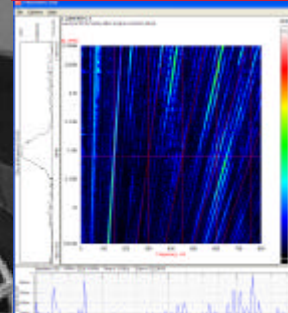

MTS Sound Camera

- **MTS Sound Camera** works just like a still/video camera. The software delivers instantaneous **snapshots** and **movies** that let you **visualize** the behaviour of stationary or transient exterior **noise sources**.
- **MTS Sound Camera** allows for **quick evaluation** of the results and correction of the test setup, if required, before proceeding with the next test condition.

MTS I-Deas Pro

- **MTS I-Deas Pro** is our core software for data acquisition and processing. It allows for FFT, 1/3oct, order analysis, intensity measurements and much more.
- **MTS** uses most popular hardware solutions for signal acquisition. PXI systems from **National Instruments** are becoming our best sellers, as well as SONY and HEIM for portable solutions.

MTS Sound Quality

- **MTS Sound Quality** enables you to **design your products** with the correct sound quality characteristics.
- **MTS Sound Quality** **reduces** the design and development **time** associated with **sound quality issues**.
